ABOUT

Final-year Computer Science Engineering student specializing in AI & ML, with hands-on experience developing AI-powered applications, Retrieval-Augmented Generation (RAG) systems, and machine learning solutions. Proficient in Python, machine learning, LLMs, and backend development, with practical experience in FastAPI, NLP, and local LLM integration. Interested in building scalable, intelligent systems and solving real-world problems through AI engineering.

EDUCATION

JSS Academy of Technical Education — Noida, Uttar Pradesh
Bachelor of Technology | Computer Science (AI & ML) | 6.5 CGPA — *Graduation Date: Jul 2027*

Apeejay School Noida — Noida, Uttar Pradesh
Senior Secondary | CBSE | 75.6% — *Graduation Date: Apr 2023*

SKILLS

Languages: Python, SQL, Java , TypeScript
AI/ML: RAG (hierarchical and vectorless retrieval), LLM applications (Ollama), MCP (FastMCP), OCR (RapidOCR), anomaly detection (Isolation Forest, scikit-learn)
Backend & Data: FastAPI, Spring Boot, REST APIs, PostgreSQL
Frontend & Tools: React.js, Streamlit, Git/GitHub, Postman

WORK EXPERIENCE

RateGain — Noida, Uttar Pradesh
Software Engineering Intern — *Jun 2026 - Sep 2026*

- Built a **CRUD REST API** for an employee management system using **Java, Spring Boot, and Spring Data JPA**, covering create, read, update, and delete operations on employee records.
- Tested the API endpoints with **Postman** and structured the code in controller, service, and repository layers.
- Developed a **Generative AI application** using **RAG**, prompt engineering, Streamlit, Ollama, and MCP for question answering and document summarization over users' own documents, using locally hosted LLMs with **no paid API keys**.

PROJECT

NexusAI | GitHub | Demo — Noida, Uttar Pradesh
Hybrid Document Intelligence & RAG System
Tech Stack: Python | FastAPI | React | Vite | PageIndex | RAG | Ollama | PyMuPDF | AnyDoc | PostgreSQL | SQLAlchemy.

- Engineered a **structure-aware RAG pipeline** integrating document parsing, Markdown normalisation, and **hierarchical indexing using PageIndex** to preserve document structure and contextual relationships.
- Developed a **structured knowledge generation and retrieval pipeline** using custom **OKF generation** and document-level indexing to identify relevant sections and contextual information for query processing.
- Integrated **locally hosted LLM inference using Ollama** with a **FastAPI backend** to generate context-grounded responses, reducing dependency on external LLM APIs.

FraudShieldAI | GitHub | Demo | Streamlit.io — Noida, Uttar Pradesh
ML-Based Real-Time Fraud Detection System
Tech Stack: Python | Scikit-learn | Isolation Forest | NumPy | StandardScaler | Flask | Streamlit | REST APIs | Pickle | JSON

- Developed a hybrid fraud detection system using **Isolation Forest and rule-based risk scoring** to identify potentially suspicious UPI transaction patterns through unsupervised anomaly detection.
- Engineered transaction-level features, including transaction amount, frequency, device familiarity, location changes and spending deviations, to assess suspicious behaviour and classify transactions into four risk levels.
- Built a **Flask REST API and Streamlit dashboard** to integrate ML-based inference, transaction analysis, risk visualization and historical transaction monitoring.

VOLUNTEER

Binary Foundation — Noida, Uttar Pradesh
Volunteer — *Oct 2025 - Apr 2026*

- Taught Maths, Hindi, and English to students from Nursery to Class 7 as a substitute teacher, coached four students in NIOS Level B and C English Literature examinations (two successful), and developed strong adaptability and communication skills through managing diverse classrooms.
